PT Novel human prostate specific tumour protein and fragments - useful PT for detecting and treating prostate cancers
PS Claim 1; Page 113-114; 141pp; English.
CC This sequence represents a human prostate tumour specific gene, and can CC be used in the method of the invention. The method is for detecting CC prostate cancer comprises contacting a biological sample with an agent CC encoded by this sequence). An antibody which binds to an immunogenic CC contion of the prostate protein, and the method can be used to detect.
CC monitor progression of, or treat prostate cancers. The antibody may calso be conjugated to a therapeutic agent for use in therapy of prostate Homo sapiens. W09837418-A2. V58645 standard; 08-DEC-1998 tumour (first entry) вр; specific gene clone DE2.

The present sequence is a new DNA which encodes an immunogenic p of a prostate tumour protein. The encoded immunogen, or the DNA can be used as a vaccine for the treatment of prostate cancer. T was identified by analysis of a subtracted cDNA library obtained subtracting a prostate tumour cDNA expression library with a nor tissue cDNA library.

                 Novel human prostate specific tumour protein and fragments - useful for detecting and treating prostate cancers Claim 1; Page 112; 141pp; English.

This sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate
                                                                                                                                                                                                                                                  08-DEC-1998 (first entry)

                                                                                                                                                                                                                                                                                                                                                         Polypeptides comprising immunogenic portions of prostate proteins - used in a vaccine for the treatment of prostate cancer Claim 3; Page 104; 130pp; Engilish.

The present sequence is a new DNA which encodes an immunogenic port of a prostate tumour protein. The encoded immunogen, or the DNA its can be used as a vaccine for the treatment of prostate cancer. The was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library.

Claim 1; Page 115; 141pp; English.

This sequence represents a human prostate tumour specific gene, and car be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                            Claim 10; Fig 1; 120pp; English.

The sequence is that of the Tub Interactor gene hTI-1 which codes for a putative serine protease. TI genes function in blochemical pathways involved in weight control and related disorders. The products can be used for treating weight disorders, e.g. obesity, cachexia or anorexia nervosa, or a related disorder such as diabetes. The products can also be used to modulate cell cycle progression and apoptosis. They can be used for treating neurodegenerative diseases which are characterised by apoptosis, including Alzheimer's disease, Parkinson's disease, Huntington's choree, amylotrophic lateral sclerosis or spinocerebellar degenerations. The products can also be used for detection, diagnosis and

Claim 5; Fig 1A-C; 68pp; English.

Claim 5; Fig 1A-C; 68pp; English.

This DNA encodes a human prostate-specific kallikrein (HPSK). A host containing an expression vector comprising the HPSK nucleic acid seque can be used to produce the protein recombinantly. The HPSK products can be used for the diagnosis of conditions or diseases associated with expression of HPSK such as prostate carcinoma and benign prostate hyperplasia. Agonists and antagonists which specifically bind to HPSK modulate its activity can be used for the preparation of treatment of such conditions or diseases. The products can also be used for detection drug screening, especially for the detection of prostate-specific kallikrein (PSK).

Claim 1; Page 114; 141pp; English.

This sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostat

The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself, can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library.

Claim 1; Page 116-117; 141pp; English.
This sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostat
                                                                                                                                                                                                                                                                                                                                                                                                                           V61253

New nucleic acids encoding human secreted proteins - obtained from cDNA libraries prepared from e.g. liver, ovary, brain, prostate, kidney, lung, umbilical cord, placenta and colon tissue claim 1; Page 205; 824pp; English.

X41094 to X41347 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in X12261 to X12514, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopolesis regulating activity, tissue growth regulating activity, chemotactic/

ligand activity, anti-inflammatory activity, tumour inhibition activity
or other activities. The products can be used in forensic, gene therapy
and chromosome mapping procedures. The sequences can also be used for
obtaining corresponding promoter sequences. The nucleic acids encoding
the signal peptide can be used for directing extracellular secretion of
a polypeptide or the insertion of a polypeptide into a membrane, or
importing a polypeptide into a cell.

DNA fragment encoding a glycosyltransferase - can be used for in vitro reactions to modify cell surface oligosaccharide(s) e.g. blood gp. determinants, to protect against transplant rejection bisclosure; Fig 3; 249pp; English.
The sequence is that encoding human glycosyl transferase. The enzyme produced by the DNA may be non glycosylated. This prevents premature loss of enzyme activity. It can also be used in in vitro reactions to modify cell surface oligosaccharide mols. e.g. blood group determinants see also Q55905-11.
